HTx H2020

Next Generation Health Technology Assessment to support patient-centred, societally oriented, real-time decision-making on access to and reimbursement for health technologies throughout Europe.

Case study 1 Head and Neck cancer

Case study 2 Diabetes Mellitus

The PROMs that we are considering in this case study are either diabetes specific and generic ones. Concerning the RWD that we will access in this case study, the available PROMS are SF36 and - EuroQol- EQ-5D.

They recommend:

This review recommends:

Case study 3 Multiple Sclerosis

Case study 4 MyeloDysplastic Syndrome

Please find below a paper that came out of our MDS-RIGHT project, describing PROMS for low-risk MDS patients. This is relevant to case study 4.

In our dataset, we have EQ-5D and survival.

Funding statement

HTx is a Horizon 2020 project supported by the European Union lasting for 5 years from January 2019. The main aim of HTx is to create a framework for the Next Generation Health Technology Assessment (HTA) to support patient-centered, societally oriented, real-time decision-making on access to and reimbursement for health technologies throughout Europe.

The HTx project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement N° 825162.

HTx consortium map on the HTx site

- Idea: colored dots per CS data available in HTx and when you click on them show PROMs available in the data.
- Idea: Per country, when you click on the country show PROMs translated/validated for that country/language.
